CELLiST™ BASAL Media (Model No. BASAL3)

Characteristics of this composition

- Chemically-defined ingredients and does not contain animal-derived ingredients. - Does not contain components of unknown composition such as hydrolysates.
- Does not contain proteins such as growth factors.
- Free of hypoxanthine and thymidine.
- Contains no source of L-glutamine.
- Free of sodium bicarbonate and poloxamers. - Contains 10.0 g/L D-glucose.

How to prepare liquid culture medium

1. Add the entire pouch (27.0 g) to 900 mL of cell culture grade water (room temperature).
2. Pour a small amount of cell culture grade water into the pouch and rinse the product remaining in the pouch with step 1.
3. Stir until completely dissolved (approximately 30 minutes).
4. Add 1,000 mg of poloxamer P188 and 1,800 mg of sodium bicarbonate.
5. Add glutamine source as needed.
6. Stir until all reagents are completely dissolved (approximately 30 minutes).
7. Adjust the final volume to 1000 mL with cell culture grade water and mix until homogeneous.
8. Sterile filter using a 0.2-0.22 µm pore size filter.
9. Store refrigerated (2-8°C) until use.
10. If necessary, add appropriate growth factors (such as insulin or IGF-1) before use.

Powder medium storage conditions

- Store refrigerated (2-8°C) and in a dark place away from high humidity until use.

Purpose

- This product is a culture medium used for research purposes. Please do not use it for any other purpose.
