**Catalog No. BAM-62-009-EX**

## Anti-Sua7p/TFIIB (yeast)

### BACKGROUND

The fundamental transcription factor TFIIB has the characteristics of stabilizing the DNA binding of TATA box-binding protein (TBP) and binding directly to DNA by its conformational change. Also its N terminal region binds to the RNA channel of RNA polymerase undertaking a very important role in the determination of transcription initiation point and promoter clearance. Sua7p is the TFIIB of budding yeast and is composed of 346 amino acid residues (aa).

The product was prepared by immunizing rabbit with recombinant protein which was over-expressed in *E. coli* with a plasmid carrying the entire Sua7p protein (1-346aa) of budding yeast, and purified by chromatography.

Using the product as antiserum in Western blotting, the band of 41 kD pertaining to Sua7p was obtained from the extract of yeast cells (Fig. 1).

<b>Product type</b>	Primary antibodies
<b>Host</b>	Rabbit
<b>Source</b>	Serum
<b>Form</b>	Liquid
	0.1% sodium azide added to the antiserum
<b>Volume</b>	50 µl
<b>Concentration</b>	
<b>Specificity</b>	
<b>Antigen</b>	Recombinant protein which was over-expressed in <i>E. coli</i> with a plasmid carrying the entire Sua7p protein (1-346aa) of budding yeast
<b>Isotype</b>	

**Application notes** WB, ELISA

#### Recommended use

It can be used in Western blotting or ELISA for detection and titration of budding yeast Sua7p.

#### Recommended dilutions

Optimal dilutions/concentrations should be determined by the end user.

Data Link: SGD [SUA7/YPR086W](#)

#### Staining Pattern

**Cross reactivity**

**Storage** 4°C
