## Fluoresceinamine -labeled Sodium Hyaluronate (U2)

(The average molecular weight:  $5 \times 10^3 \sim 10 \times 10^3$  Da )

Product code: CSR-FAHA-U2

Volume: 3 mg (lyophilized)

Appearance: yellow green lyophilizate

Source of sodium hyaluronate: Streptococcus sp.

CAS number of sodium hyaluronate: 9067-32-7

Fluorescent probe: Fluoresceinamine

CAS number of fluorescent probe: 3326-34-9

Outline: Hyaluronan (HA) is a glycosaminoglycan composed of repeating disaccharide units of N-acetyl-D-glucosamine (GlcNAc) and D-glucuronic acid (GlcUA). HA is abundant in synovial fluid, skin, umbilical cord, and vitreous body exists as unbranched polysaccharide chains. This product is prepared by the fluorescent labeling of HA according to the method of Ogamo et al.<sup>1)</sup>. Fluoresceinamine molecules are chemically attached to carboxyl groups of the GlcUA of HA. This product contains 3mg of lyophilized FAHA per vial. The excitation wavelength is 490-500 nm and the emission wavelength is 515-525 nm. The enclosed Certification of Analysis lists actual values for product specifications.

Handling precautions:

- 1) Store protected from light at  $-20^{\circ}\text{C}$  or below avoiding humidity. We recommend storing in aliquots appropriate for anticipated usage after the dissolution.
- 2) Protect from light as much as possible. Product can be used at room temperature when protected from strong light.
- 3) Fluorescence intensity varies with pH of the solution and is lower under acidic conditions. Note the pH of the sample solution when measuring fluorescence intensity.
- 4) This product is for research use only. Not for use in diagnostic or therapeutic procedures.
