Thermosensitive TRP Channel Anti Mouse TRPA1 Polyclonal Antibody

Mammals feel a wide range of temperature spanning from cold to heat with specialized neurons in the peripheral nervous system. With this range, temperatures over about 43 degrees C and below about 15 degrees C evoke not only a thermal sensation, but also a feeling of pain.

Nine thermosensitive ion channels have been reported, all of which belong to TRP (transient receptor potential) superfamily. They are expressed in sensory tissues, such as nociceptors and skin. Among them, TRPA1 (TRP cation channel, subfamily A, member 1) has been identified as cold-sensitive ion channel. TRPA1 is activated at approximately 17 degrees C, a temperature that is reported as painfully cold by humans.

In addition to noxious cold, TRPA1 is activated pungent ingredients present in mustard, garlic, ginger, clove, wintergreen and cinnamon all and found in a subset of nociceptive sensory neurons where it is coexpressed with TRPV1/VR1 (capsaicin/heat receptor). Moreover, TRPA1 has been proposed to be a component of the mechanosensitive transduction channel of vertebrate hair cells.

This antibody will be very useful to research the nocifensive (thermosensitive and mechanosensitive) response to pain.

Package Size 50µg (200µL/vial)

Format Rabbit polyclonal antibody 0.25mg/mL

Buffer PBS [containing 2% Block Ace as a stabilizer, 0.1%Proclin as a bacteriostat]

Storage Store below -20° C

Once thawed, store at 4°C. Repeated freeze-thaw cycles should be avoided.

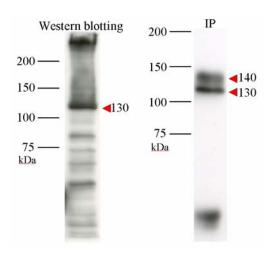

Purification method This antibody was established from the serum of a rabbit immunized with the partial

peptide corresponding to amino acid 12-24 of mouse TRPA1, and purified by peptide

affinity chromatography.

Working dilution For Western blotting :1.6 μg/ml

For Immunoprecipitation : 1.6 μg/ml

Sample: HEK293 cells overexpressing mouse TRPA1 (cell membrane fraction)

Left: Western blotting Right: Immunoprecipitation

Preparation of antibodies and instruction
Dr. Makoto Tominaga at Section of Cell Signaling,

研究用試薬

温度感受性 TRP チャネル **抗マウス TRPA1 ポリクローナル抗体**

哺乳類では、暑さや寒さといった外界の温度を、末梢神経に存在する特異的受容体で感じています。 また、約 43 度以上と約 15 度以下では温度感覚に加えて、痛みをもたらします。

これまでに、9 つの温度感受性イオンチャンネルが確認されています。これらは TRP (transient receptor potential) サブファミリーに分類され、感覚神経や皮膚に発現しています。これらのうち、TRPA1 (TRP cation channel, subfamily A, member 1) は冷刺激イオンチャンネルとして報告されました。TRPA1 は、ヒトにおいて痛みを感じる 17 度以下の冷刺激によって活性化されます。

侵害性冷刺激に加えて、 TRPA1 はマスタード、ニンニク、シナモンに含まれる刺激成分によって 活性化されるほか、TRPV1/VR1 (capsaicin/heat receptor) と感覚神経細胞で共発現することが分かっています。 さらに TRPA1 は、有毛細胞の機械受容伝達チャンネルであることも示唆されています。

痛みの伝達、機械刺激、侵害性冷刺激などのメカニズム解明の研究に本抗体をご使用下さい。

容量 50μg (200μL/vial)

形状 ウサギポリクローナル抗体 0.25mg/mL、凍結品

バッファー PBS [2%ブロックエース (安定化タンパク質), 0.1% Proclin 含有]

保管方法 -20℃以下

抗体を低濃度にて低温保存されますと、失活する恐れがあります。

融解後は4℃で保存し、お早めにご使用下さい。

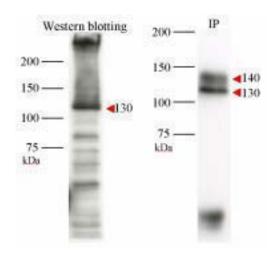

また凍結融解を繰り返すことは避けて下さい。.

製造方法 マウス TRPA1 の部分ペプチド (12-24 アミノ酸残基) を免疫したウサギの抗血清よ

り、ペプチドアフィニティカラムにて精製。

使用濃度 ウエスタンブロッティング:1.6 μg/ml

免疫沈降 :1.6 μg/ml

Sample: HEK293 cells overexpressing mouse TRPA1 (cell membrane fraction)

- (左)ウエスタンブロッティング
- (右)免疫沈降
