## Description

The recombinant Human FOxM1 protein expression involves transfecting e.coli cells with a DNA expression vector containing the gene encoding the recombinant protein of interest (222-360aa) and then culturing the cells so that they express the desired protein. The protein features a N-terminal GST tag fusion. The recombinant Human FOxM1 protein is collected and purified from the cell lysate through affinity purification. Its purity is greater than 85%, as measured by SDS-PAGE.

## Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.

## Shelf Life
