Description

In e.coli cells, the generation of the recombinant Human MYH6 protein includes integrating a DNA fragment encoding the Human MYH6 protein (160-816aa) into a plasmid vector and transforming this vector into e.coli cells. Cells containing the plasmid are screened, cultured, and induced to yield the MYH6 protein. A N-terminal 10xHis tag is attached to the protein. Lysis of the cells facilitates the collection of the recombinant Human MYH6 protein, which is subjected to affinity purification and then SDS-PAGE analysis and subsequent staining of the gel with Coomassie Brilliant Blue. The purity of the obtained recombinant Human MYH6 protein is greater than 85%.

Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.

Shelf Life

The shelf life is related to many factors, storage state, buffer ingredients, storage temperature and the stability of the protein itself. Generally, the shelf life of liquid form is 6 months at -20°C/-80°C. The shelf life of lyophilized form is 12 months at -20°C/-80°C.
