## Description

Achieving the recombinant Human HLA-B protein production entails controlling the expression of the desired gene in *e.coli* cells. The sequence (25-309aa) of foreign DNA is integrated into an expression vector and then transferred to *e.coli* cells. Selected positive cells are cultured to induce the expression of the desired protein. The protein carries a N-terminal 6xHis tag. The recombinant Human HLA-B protein is purified through affinity purification, exhibiting a purity greater than 85%, as determined by SDS-PAGE.

## Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.

## Shelf Life
