(Tris-Glycine gel) Discontinuous SDS-PAGE (reduced) with 5% enrichment gel and 15% separation gel.

Description

The process of synthesizing the recombinant Human CELA2B protein includes transfecting e.coli cells with a DNA expression vector containing the gene for the desired protein (29-269aa). Subsequently, the cells are cultured to induce the expression of the intended protein. The protein is fused with a N-terminal 6xHis-SUMO tag. The recombinant Human CELA2B protein is then collected and purified from the cell lysate through affinity purification. It exhibits a purity exceeding 85%, as verified by SDS-PAGE.

Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL.We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.

Shelf Life

The shelf life is related to many factors, storage state, buffer ingredients, storage temperature and the stability of the protein itself. Generally, the shelf life of liquid form is 6 months at -20°C/-80°C. The shelf life of lyophilized form is 12 months at -20°C/-80°C.
