

Recombinant Streptomyces caespitosus

Modification methylase Scal (scalM)

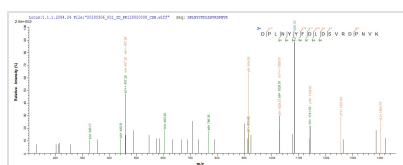

Product Code	CSB-EP528741FNZ
Relevance	This methylase recognizes the double-stranded sequence AGTACT, causes specific methylation on C-5 on both strands, and protects the DNA from cleavage by the Scal endonuclease.
Abbreviation	Recombinant Streptomyces caespitosus scalM protein
Storage	The shelf life is related to many factors, storage state, buffer ingredients, storage temperature and the stability of the protein itself. Generally, the shelf life of liquid form is 6 months at -20°C/-80°C. The shelf life of lyophilized form is 12 months at -20°C/-80°C.

Reconstitution

We recommend that this vial be briefly centrifuged prior to opening to bring the contents to the bottom. Please reconstitute protein in deionized sterile water to a concentration of 0.1-1.0 mg/mL. We recommend to add 5-50% of glycerol (final concentration) and aliquot for long-term storage at -20°C/-80°C. Our default final concentration of glycerol is 50%. Customers could use it as reference.
