# For Research Use Only. Not for use in diagnostic procedures.

# Recombinant Human IL-18 (without BSA)

Code No.QuantityFormB003-525 μgSolution

BACKGROUND: Interleukin 18 (IL-18) is an 18-kDa cytokine which identified as a costimulatory factor for production of interferon-γ (IFN-γ) in response to toxic shock and shares functional similarities with IL-12. IL-18 is synthesized as a precursor 24-kDa molecule without a signal peptide and must be cleaved to produce an active molecule. IL-1 converting enzyme (ICE, Caspase-1) cleaves pro-IL-18 at aspartic acid in the P1 position, producing the mature, bioactive peptide that is readily released from the cells. It is reported that IL-18 is produced from Kupffer cells, activated macrophages, keratinocytes, intestinal epithelial cells, osteoblasts, adrenal cortex cells and murine diencephalon. IFN-y is produced by activated T or NK cells and plays critical roles in the defense against microbial pathogens. IFN-y activates macrophages and enhances NK activity and B cell maturation, proliferation and Ig secretion. IFN-y also induces expression of MHC class I and II antigens and inhibits osteoclast activation. IL-18 acts on T helper type-1 (Th1) T cells and in combination with IL-12 strongly induces them to produce IFN-γ. Pleiotropic effects of IL-18 have also been reported, such as, enhancement production of IFN-γ and GM-CSF in peripheral blood mononuclear cells, production of Th1 cytokines, IL-2, GM-CSF and IFN-γ in T cells, enhancement of Fas ligand expression by Th1 cells.

**DESCRIPTION:** cDNA encoding the matured Human IL-18 protein sequence (corresponding to 37-193 aa) was expressed in *E. coli*.

**PURITY:** Greater than 90% purity as confirmed on SDS-PAGE by Coomassie brilliant blue staining.

# **MOLECULAR WEIGHT: 18 kDa**

### **ENDOTOXIN LEVEL:**

Less than 0.1 ng per 1  $\mu g$  of recombinant human IL-18 protein, when measured by the LAL assay.

**FORMULATION:** 25 μg in 250 μL volume of PBS containing 1% sucrose.

# **INTENDED USE:**

For Research Use Only. Not for use in diagnostic procedures.

**STORAGE:** This product is stable for 24 months from the date of manufacture when store at -80°C. Avoid repeated freezing and thawing. For storage, prepare appropriate aliquots and freeze them at -80°C using low retention tube.

**ACTIVITY:** Induction of IFN-γ by KG-1 cell [human myelomonocyte; ATCC CCL246] in response to the recombinant human IL-18 was measured using human IFN-γ ELISA.

#### IFN-y PRODUCTION ASSAY:

- 1) KG-1 cells were cultured at 3 x  $10^5$  cells/mL for 24 hours at 37°C in 5% CO<sub>2</sub> incubator with RPMI 1640 containing 10% fetal calf serum.
- 2) After 24 hours of pre-culture, the cell concentration was adjusted to 1.5 x 10<sup>6</sup> cells/mL and incubated for 24 hours at 37°C in 5% CO<sub>2</sub> incubator with RPMI 1640 containing 10% fetal calf serum in the presence of IL-18.
- 3) The culture supernatant was recovered and the amount of IFN-γ were measured by Human IFN-γ ELISA Kit.
