

# SUMO-2 [6His-tagged]

## Modifying Protein

**Alternate Names:** HSMT3, MGC117191, Sentrin 2, Small ubiquitin like modifier 2, SMT3 homolog 2, SMT3B, SMT3H2

**Cat. No.** 60-0003-500  
**Lot. No.** 1365

**Quantity:** 500 µg  
**Storage:** -70°C

FOR RESEARCH USE ONLY

NOT FOR USE IN HUMANS

CERTIFICATE OF ANALYSIS Page 1 of 2

## Background

Small Ubiquitin-like Modifiers (SUMOs) are a family of small, related proteins that can be enzymatically conjugated to a target protein by a post-translational modification process termed SUMOylation. SUMO-2 is a highly conserved, small ubiquitin-related modifier that has been shown to be covalently conjugated to a large variety of cellular proteins (Dai and Liew, 2001; Kamitani *et al.*, 1997; Su and Li, 2002). Identification and cloning of human SUMO-2 was first described by Kamitani *et al.* (1997). Mouse and human SUMO-2 proteins are identical, with human SUMO-2 sharing 44% and 86% amino acid identity with SUMO-1 and SUMO-3, respectively (Su and Li, 2002). SUMO-2 has been shown to interact with the E3 ligase RNF28 through its RING domain (Dai and Liew, 2001). SUMO-2 is conjugated to a target protein in a similar way to ubiquitin and has been implicated in multiple cellular processes, including nuclear transport, cell cycle control, oncogenesis, inflammation and response to viral infection. SUMO-2 forms a number of conjugates similar to those of SUMO-1, first requiring cleavage of its C terminus for conjugation to occur (Kamitani *et al.*, 1997). RANGAP1 is modified by either SUMO-2 or SUMO-1, and formation of the sentrinized (SUMOylated) RANGAP1 requires covalent linkage between itself and SUMO-2 or SUMO-1 (Kamitani *et al.*, 1997). SUMO-2 has been localised predominantly to nuclear bodies, distinct from SUMO-1 and SUMO-3 which are found localised to the nuclear membrane (Matunis *et al.*, 1996).

## Physical Characteristics

**Species:** human

**Source:** *E. coli* expression

**Quantity:** 500 µg

**Concentration:** 1 mg/ml

**Formulation:** 50 mM HEPES pH 7.5, 150 mM sodium chloride, 2 mM dithiothreitol, 10% glycerol

**Molecular Weight:** ~13 kDa

**Purity:** >98% by InstantBlue™ SDS-PAGE

**Stability/Storage:** 12 months at -70°C; aliquot as required

### Protein Sequence:

**MGSSHHHHHSSGLEVLVQGP**GSMADEKPKEGVK  
TENNDHINLKVAGQDGSVVQFKIKRHTPLSKLM  
KAYCERQGLSMRQIRFRFDGQPINETDTPAQL  
MEDEDTIDVFPQQQTGG

Tag (**bold text**): N-terminal His  
Protease cleavage site: PreScission™ (LEVLVQ▼GP)  
SUMO-2 (regular text): Start **bold italics** (amino acid residues 1-93)  
Accession number: NP\_008868

## Quality Assurance

**Purity:** 4-12% gradient SDS-PAGE InstantBlue™ staining  
Lane 1: MW markers  
Lane 2: 1 µg His-SUMO-2

### Protein Identification:

Confirmed by mass spectrometry.

### E2 Thioester SUMO-2 Loading Assay:

The activity of His-SUMO-2 was validated by loading His-SUMO-2 onto the active cysteine of the UBE2I E2 enzyme via a transthiolation reaction. Incubation of His-SUMO-2, SAE1/SAE2 and UBE2I enzymes in the presence of ATP at 30°C was compared at two time points, T<sub>0</sub> and T<sub>10</sub> minutes. Sensitivity of the His-SUMO-2/UBE2I thioester bond to the reducing agent DTT was confirmed.
